3M™ Safety & Security Window Film
Ultra S600
Technical Data

Product Features & Benefits
- Premium tear resistant safety and security window film utilizing microlayered film technology
- Optically clear, 6-mil (0.15 mm) thick film for application to interior glass surface
- Provides shatter resistance to protect from broken glass hazards caused by seismic activity, spontaneous glass breakage, and other impact events
- Broad range of application use, including bomb blast mitigation, windstorm protection, safety glazing, and deterring smash & grab attempts and break & entry events
- Can be combined with 3M Impact Protection Attachment systems for additional safety and security
- Exhibits strong adhesion to glass and shock absorbing properties
- Protective hardcoat provides scratch resistance and durability
- Protects from the harmful effects of UV light and reduces fading of interior furnishings

Specifications
3M Ultra S600 Safety and Security Window Film

1.0 Scope
This specification is for an optically clear glass shatter resistant and abrasion resistant window film which, when applied to the interior window surface, will help hold broken glass together and reduce the ultra-violet light that normally would enter through the window. This is an easily applied, premium tear-resistant safety and security window film that is useful for increased measure of protection in a broad range of applications, including basic glass fragment retention, spontaneous glass breakage, seismic preparedness, safety glazing applications, protection from windborne debris, bomb blast mitigation, and deterring Smash and Grab or Break and Entry events. Certain applications may require the film be used in conjunction with a film attachment system. The film shall be called 3M Ultra S600 Safety and Security Window Film.

2.0 Applicable Documents
The publications listed below form a part of this specification to the extent referenced. The publications are referred to in the text by the basic designation only.

The 1985 American Society for Heating, Refrigeration, and Air Conditioning Engineers (ASHRAE) Handbook of Fundamentals.
The American National Standards Institute (ANSI).
ANSI Z97.1 Specification for Safety Glazing Material used in Buildings
The American Society for Testing and Materials (ASTM):
• ASTM E-308 Standard Recommended Practice for Spectrophotometry and Description of Color in CIE 1931 System
• ASTM E-903 Standard Methods of Test for Solar Absorbance, Reflectance and Transmittance of Materials Using Integrating Spheres
• ASTM D-882 Standard Test Method for Tensile Properties of Thin Plastic Sheeting
• ASTM D-1044 Standard Method of Test for Resistance of Transparent Plastics to Surface Abrasion (Taber Abrader Test)
• ASTM D-2582 Standard Test Method for Puncture-Propagation Tear Resistance of Plastic Film and Thin Sheetings
• ASTM D-4830 Standard Test Methods for Characterizing Thermostatic Fabrics Used in Roofing and Waterproofing.
• ASTM G-90 Standard Practice for Performing Accelerated Outdoor Weathering for Non-metallic Materials Using Concentrated Natural Sunlight
• ASTM G 26 Standard Practice for Performing Accelerated Outdoor Weathering for Non-metallic Materials Using Concentrated Natural Sunlight
• ASTM E-84 Standard Method of Test for Surface Burning Characteristics of Building Materials
• ASTM D-1004 Standard Method of Test for Resistance of Transparent Plastics to Tearing (Graves Tear Test)
• ASTM E-1886 Standard Test Method for Performance of Exterior Windows, Curtain Walls, Doors, and Impact Protective Systems Impacted by Missile(s) and Exposed to Cyclic Pressure Differentials
• ASTM F-1642 Standard Method of Test for Glazing and Glazing Systems Subject to Airblast Loadings, as adapted by the U.S. Government GSA Test Standard Protocols
• ASTM F-2912 Standard Specification for Glazing and Glazing Systems Subjected to Airblast Loadings
GSA-TS01-2003 General Services Administration Standard Test for Glazing and Glazing Systems Subject to Airblast Loadings

Window 4.1. A Computer Tool for Analyzing Window Thermal Performance, Lawrence Berkeley Laboratory

3.0 Requirements of the Film
3.1 Film Material: The film material shall consist of an optically clear polyester film, consisting of 42 co-extruded microlayers, with a durable acrylic abrasion resistant coating over one surface, and a UV stabilized pressure sensitive adhesive on the other. The film color is clear and will not contain dyed polyester. The film shall have a nominal thickness of 6 mils (0.006 inches). There shall be no evidence of coating voids. The film shall be identified as to Manufacturer of Origin (hereafter to be called Manufacturer).

Important:
The information provided in this report is believed to be reliable; however, due to the wide variety of intervening factors, 3M does not warrant that the results will necessarily be obtained. All details concerning product specifications and terms of sale are available from 3M.
3.2 **Film Properties (nominal):**
   a) Tensile Strength (ASTM D882): 30,000 psi (60 lbs per inch width)
   b) Break Strength (ASTM D882): 30,000 psi (180 lbs per inch width)
   c) Percent Elongation at Break (ASTM D882): 125%
   d) Percent Elongation at Yield (ASTM D882): greater than 100%
   e) Yield Strength at 3% Elongation: 12,000 psi (24 lbs per inch width)
   f) Graves Tear Resistance (ASTM D1004, maximum force): 20 lbs
   g) Graves Area Tear Resistance (ASTM D1004): 1,150 lbs%
   h) Puncture Propagation Tear Resistance (ASTM D2582): 19.2 lbf
   i) Young’s Modulus (ASTM D882): 500 kpsi

3.3 **Solar Performance Properties:** film applied to ¼” thick clear glass
   a) Visible Light Transmission: 84%
   b) Visible Reflection: not more than 10%
   c) Ultraviolet Transmission: less than 1% (300 – 380 nm)
   d) Solar Heat Gain Coefficient: 0.78

3.4 **Flammability:** The Manufacturer shall provide independent test data showing that the window film shall meet the requirements of a Class A Interior Finish for Building Materials for both Flame Spread Index and Smoked Development Values per ASTM E-84

3.5 **Abrasion Resistance:** The Manufacturer shall provide independent test data showing that the film shall have a surface coating that is resistant to abrasion such that, less than 5% increase of transmitted light haze will result in accordance with ASTM D-1044 using 100 cycles, 500 grams weight, and the CS10F Calbrase Wheel.

3.6 **Adhesive System:** The film shall be supplied with a high mass pressure sensitive weatherable acrylate adhesive applied uniformly over the surface opposite the abrasion resistant coated surface. The adhesive shall be essentially optically flat and shall meet the following criteria:
   a. Viewing the film from a distance of ten feet at angles up to 45 degrees from either side of the glass, the film itself shall not appear distorted.
   b. It shall not be necessary to seal around the edges of the applied film system with a lacquer or other substance in order to prevent moisture or free water from penetrating under the film system.

3.7 **Impact Resistance for Safety Glazing:** The film, when applied to either side of the window glass, shall pass a 400 ft-lb impact when tested according to 16 CFR CPSC Part 1201 (Category 2) and ANSI Z97.1 (Class A, Unlimited) and shall pass the accelerated weathering test requirements for both tensile strength and peel strength.

3.8 **Windborne Debris Protection:** per ASTM E1886 / E1996
   a. Film shall pass impact of Medium Large Missile “C” and withstand subsequent pressure cycling (per ASTM E 1996 and E 1886) at 50 psf Design pressure with use of 3M Impact Protection Adhesive attachment system.
   b. Film shall pass impact of Small Missile “A” and withstand subsequent pressure cycling (per ASTM E 1996 and E 1886) at 50 psf Design Pressure with use of 3M Impact Protection Adhesive attachment system.

3.9 **Bomb Blast Mitigation:**
   a. GSA Rating of “3A” (Very Low Hazard) with minimum blast load of 11 psi overpressure and 55 psi*msec blast impulse
   b. GSA Rating of “3B” (Low Hazard) with minimum blast load of 10 psi overpressure and 89 psi*msec blast impulse
   c. ASTM F1642 rating of “Low Hazard” with minimum blast load of 4 psi overpressure and 28 psi*msec blast impulse
