

## N.G.S.'s TRI-SHIELD Defeats Repeated Break-in Attempts

### Thieves Stopped (3) Times from Entry at National Retailer

#### Problem:

A national phone retailer had problems with smash and grab episodes at stores around the USA. N.G.S. came out to demonstrate the effectiveness of our proprietary anti-intrusion system called TRI-SHIELD that has been tested to meet ASTM F1233 level 1.0 (10 strikes with a ball peen hammer with no human passage possible).

#### Solution:

The construction team promptly approved TRI-SHIELD as the new anti-intrusion specification and since that time the system has been tested and successfully repelled repeated break in attempts such as the exact attempt that happened below as described by the asset protection team:

Friday February 7th 2014 At 3:09 PST Store \*\*\*\* had an attempted break-in. The suspect tossed a rock hitting the right entrance door which bounced off only scuffing the film. He then tossed the rock at the left door which broke the glass. His next attempt saw the rock go through the film and onto the sales floor. The suspect next pushed the glass which flexed but did not give way. He then ran from the store without gaining access. The Police and store GM arrived at the store at 3:20:56 to walk the building.

Contact N.G.S. today @ 866-925-2083 to deploy the highest tested and best performing retrofit system to protect your storefronts & assets.

(1) Thief at Door 1st strike (2) 2nd strike with a rock (3) 3rd strike, push and run away (4) Police arriving on scene
